Contents

Foreword xi
An Introduction to the Biennial Research and Technology Development Report 2009 xii
Guide to Icons Used in This Document xiii
The Innovation Partnerships Office xiv
Overview of Exploration Program xvi
Acronyms and Abbreviations xx

Guide to Icons Used in This Document

Our experienced staff has made an attempt to identify an application or a use for each report employing a unique icon:

Commercial	Reports with near-term commercial applications
Low-Earth Orbit	Reports with use in low-Earth orbit operations
Long Duration	Reports with application for long-duration space flight
Exploration	Reports with technologies relevant to Exploration Program
Orion/CEV	Reports with technologies relevant to Orion/ Crew Exploration Vehicle (CEV) components
Moon	Reports relevant for missions to, operations on, or exploration of the moon

Human Health and Medicine

Space Life Sciences Innovation and Integration Successes 3
Space Medicine: Past, Present, and Future Issues 5
Human Adaptation to Space: Space Physiology and Countermeasures 7
Development and Clinical Evaluation of Intranasal Scopolamine Gel Formulation 9
Media Ion Composition Controls Regulatory and Virulence Response of *Salmonella* in Space Flight 10
Varicella-zoster Virus in the Saliva of Patients with Herpes Zoster 12
Innovative Treatments for Dental Emergencies During Lunar and Exploration Missions 13

Adaptation of the Skeletal System During Long-duration Space Flight 15

Recovery of Space-flight-induced Bone Loss: Bone Mineral Density After Long-duration Missions as Fitted with an Exponential Function 17

The Flight Analogs Project as a Test Platform for the Skeletal Effects of Space Flight 19

Vitamin D Studies: From the Antarctic to the International Space Station 22

Novel Skeletal Muscle Models for Space Exploration and Medical Applications 23

Gender Differences in Blood Pressure Control During 90-day Bedrest 25

Countermeasures to Space-flight-induced Orthostatic Hypotension 27

Environmental Technologies

Leadership in Energy and Environmental Design at Johnson Space Center 33

Exploration Life Support Air Revitalization System Technology Development for Human Test Subjects 36

Spacecraft Water Monitoring: Adapting to an Era of Emerging Scientific Challenges 39

Cascade Distillation Subsystem Development 41

Rotating Reverse Osmosis for Water Recovery on Long-term Space Missions 43

Urine Pretreatment Development 45

Air Quality Monitoring: Risk-based Choices 46

Design and Development of Airlock Contamination Detection Kits for the Space Shuttle and International Space Station 48

Space Radiation Protection Status and Challenges 50

Measuring Ionospheric Electric Field Gradients with the International Space Station Floating Potential Probe 53

Lunar In-situ Resource Utilization 55

Propellant Specification and Manual Development to Enable Testing 60

Using Lasers to Capture the Speed of a Hypervelocity Projectile 62

Lunar Dust and Lunar Dust Simulant Activation and Monitoring 64

Cleaning to Achieve Sterility: An Evaluation of State-of-the-art Cleaning Techniques to Remove Particles of Biological Origin 66

Materials Development and Testing

New Developments in Nondestructive Evaluation for Composite Pressure Vessel Testing 71

Acoustic Emission and Microscopic Characterization for Improved Composite Overwrapped Pressure Vessel Health Monitoring 73

Orion Composite Overwrapped Pressure Vessel Safety Testing 75

Thermal Radiation Impacts Protection System 77

Type-specific Single-wall Carbon Nanotube Growth and Separation 79

Improving the Process: Assessing Reactivity of Nonmetals in Aerospace Fluids 81

Lunar Inflatable Habitat Development 84

Computed Tomography Scanning and Analysis of the Stardust Heat Shield 86

Flammability and Explosives Technologies

Changing the Standards for Promoted Combustion Pass/Fail Criteria 91

Long-term Testing of Oxygen Compressors 93

Design and Verification of a Robust Filter for Oxygen Service 95

Understanding Ignition of Oxygen System Components by Particle Impact 98

Oxygen Compatibility Assessment Database Web Application 100

New Methodology: Hazard Assessment Protocol for Aerospace Hydrogen Systems 102

Evaluation of Spacecraft Materials Flammability for the Constellation Program 105

Determining the Time for Oxygen-exposed Materials to Return to Reduced Flammability 107

Redesign of Promoted Combustion Test System: Inductance Canceling Feedthrough for Pressurized Systems 110

Innovative Thermal Measurement Techniques for Y-shaped Primer Chamber Assembly Pyrotechnic Valves 112

Analysis of a Pyrovalve Firing: Estimating Pyrotechnic Reactions 115

Power, Batteries, and Propulsion

NASA Engineering and Safety Center-supported Battery Study 121

Advanced Battery Technology Programs 123

Advanced Fuel Cells for Space Exploration Applications 126

Orbiter Auxiliary Power Unit Hydrazine Fuel Line Vacuum Test 129

Improved Method: Short-term Determination of Low Corrosion Rates in Hydrazines 131

High-sensitivity Measurement for Hypergol Permeation of Personal Protective Equipment Materials 132

Robotics, Autonomous Systems, and Software

Robonaut/Centaur 137

Lunar Rover Development 140

Improving Robotic Operator Performance
Using Augmented Reality 142

The Performance of the Orbiter Wing
Leading Edge Impact Detection System
During Space Shuttle Ascent. 144

Anomaly Monitoring Inductive
Software System 146

Integrated Docking Simulation with
Six-degree-of-freedom Dynamic Test System 148

Autonomous Landing and Hazard
Avoidance Technology. 150

Using the Orbiter Wing Leading Edge Impact
Detection System for Micrometeoroid
and Orbital Debris Impact Monitoring. 153

Natural Feature Image Recognition
Enables Docking. 155

Fiber-optic Micrometeoroid Impact Sensor
for Future Lunar Exploration Missions 157

Technologies for Extravehicular Activity and Protection from Harsh Environments

Extravehicular Activity Technology
Development – Thermal Subsystem 161

Extravehicular Activity Technology
Development – Oxygen Subsystem 163

Extravehicular Activity Technology
Development – Ventilation Subsystem 165

Extravehicular Activity Technology
Development – Portable Life Support
System Packaging 167

First-generation Suit Port
Development and Testing 169

Electrical Shock Hazards during Extravehicular
Activity on the International Space Station. 171

Water Egress and Survival. 172

Space and Ground Operations

The Mobile Information System: A Hands-free Procedures System 177

Crew Exploration Vehicle Parachute Assembly System. 179

International Space Station Operations 182

Automating International Space Station File Management Using Agent-based Systems Integration 184

Planning and Monitoring International Space Station Solar Array Operations 186

Search and Relationship-mining of Heterogeneous Flight Control Documents 189

Trajectory Guidance for Lunar Descent and Landing 192

Targeting for Trans-Earth Injection Maneuvers 194

Low-impact Docking System. 196

Planetary Sciences

Astromaterials Research and Exploration Science Overview 201

Discovery of a New Mineral from a Cometary Particle. 203

Constraining Planetary Melting and Differentiation with Experimentation at High Pressure and Temperature 205

Celebrating Thirty Seasons of Antarctic Meteorites: Johnson Space Center Antarctic Meteorite Laboratory. 207

New Perspectives on Geomorphic Processes: Megafans in Terrestrial and Planetary Environments. 209

Searching for Antimatter and Dark Matter 211

Image Science Support for Exploration Program 214

Improving Access to Astronaut Photography through Google Earth 216

Object-based Image Analysis of Astronaut Photography 218
