

Collaborating with Johnson Space Center

NASA and JSC have a long history of working with colleges and universities, industry, federal laboratories, and other research and technology development organizations. Means are in place to accomplish collaboration and partnership objectives. Both reimbursable and non-

reimbursable collaborative agreements can be used to provide mutual leverage of government, university, and industry resources in the cooperative pursuit of joint-interest research and technology development efforts.

We look forward to working with both the commercial and the academic groups interested in partnering with JSC.
